Alpine 20 Plus CO

Intel CPU Cooler for Servers

Fluid Dynamic Bearing The Fluid Dynamic Bearing comes with an oil capsule that avoids lubricant leakage. Thus this bearing is as quiet as a sleeve bearing but comes with a significantly higher

service life.

Dual Ball Bearing

The premium quality Japanese dual ball bearing allows continuous operation 24/7 without the slightest compromise in performance. The life span is up to 5 times longer compared to models using a generic bearing.

Passive

The cooling performance can keep every AM1 CPU at bay by margin and cools efficiently even the most comfortable noise level and thus power hungry AM1 APU completely passive. It is maintenance free even at maximum CPU load. The and does not collect dust, offering an affordable solution to make a PC absolutely silent.

Semi Passive

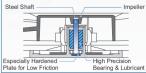

The ARCTIC F12 fan is well known for high airflow at a this cooler won't be disturbing real improvement is the motor and controller. Our German engineers made this fan work at lower speed when performance is not needed.

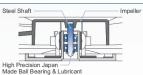

Outstanding CPU cooling performance through water cooling solution with efficient water pump. Latest motor technology and smooth tubes offer top performance at only 2 watt power consumption. It is not just the

most powerful cooling solution,

but also the quietest.

Water Cooling
